Abstracts

The global Liver Cancer Drug market size is poised to register 17.8% growth from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Liver Cancer Drug market across By Drug Class (Targeted Therapy, Immunotherapy, Chemotherapy), By Application (Hepatocellular Carcinoma, Cholangio Carcinoma).

The Liver Cancer Drug market is experiencing substantial growth attributed to the increasing incidence of liver cancer, advancements in targeted therapies and immunotherapies, and expanding treatment options for hepatocellular carcinoma (HCC) and cholangiocarcinoma (CCA). Liver cancer, comprising HCC and intrahepatic CCA, is among the leading causes of cancer-related mortality worldwide, driving the demand for effective treatment modalities. Factors such as the growing prevalence of risk factors such as chronic hepatitis B and C infections, non-alcoholic fatty liver disease (NAFLD), and alcohol-related liver disease, and the need for early diagnosis and intervention are driving market expansion. Additionally, advancements in molecular profiling techniques, biomarker discovery, and precision medicine approaches, along with the development of targeted therapies against oncogenic drivers such as vascular endothelial growth factor (VEGF) and epidermal growth factor receptor (EGFR), are fueling innovation in the market. Moreover, the emergence of immune checkpoint inhibitors, chimeric antigen receptor (CAR) T-cell therapies, and cancer vaccines for liver cancer treatment, and the increasing adoption of combination therapy regimens and personalized treatment algorithms are driving market growth. Furthermore, efforts to improve patient access to

innovative therapies, accelerate clinical trial recruitment, and develop next-generation liver cancer drugs with improved efficacy and safety profiles are expected to further propel market growth in the foreseeable future.
