Abstracts

The global Livestock Dewormers market size is poised to register 4.7% growth from 2024 to 2032, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Livestock Dewormers market across By Animal (Cattle, Swine, Poultry, Others), By Route of Administration (Oral, Topical, Others)

With the increasing demand for animal health products that improve productivity and prevent parasitic infections in livestock populations, there is a rising need for dewormers and anthelmintic drugs that effectively control gastrointestinal parasites and ensure animal welfare. Market growth is driven by factors such as expanding global meat consumption, the rising prevalence of parasitic diseases in livestock production systems, and technological advancements in drug formulations and delivery methods. Additionally, the expanding applications of livestock dewormers in commercial farming operations, veterinary clinics, and animal husbandry practices, as well as the growing adoption of integrated parasite management programs and diagnostic testing, contribute to market expansion. Further, the development of novel anthelmintic compounds and combination therapies, the integration of deworming strategies into animal nutrition and biosecurity protocols, and the emphasis on sustainable farming practices and regulatory compliance are expected to further accelerate market growth in the coming years.
