Abstracts

The global Lung Stent market size is poised to register 7.72% growth from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Lung Stent market across By Product (Self-Expandable Stents, Balloon- Expandable Stents), By Material (Metal , Silicone, Hybrid), By Type (Tracheobronchial Stents, Laryngeal Stents).

The Lung Stent market is witnessing steady growth driven by the rising prevalence of respiratory diseases, increasing adoption of minimally invasive procedures, and advancements in stent design and materials. Lung stents, also known as bronchial or tracheal stents, are medical devices used to maintain airway patency, relieve airway obstruction, and manage complications such as stenosis, strictures, and tumors in the respiratory tract. Factors such as the growing incidence of conditions such as lung cancer, chronic obstructive pulmonary disease (COPD), and tracheobronchomalacia requiring airway support, and the demand for palliative and therapeutic interventions to improve respiratory function and quality of life are driving market expansion. Additionally, the development of biocompatible and drug-eluting stents for enhanced tissue integration and reduced risk of restenosis, and the increasing adoption of flexible and retrievable stent designs for improved patient outcomes and ease of removal are fueling innovation in the market. Moreover, the rising preference for minimally invasive bronchoscopic procedures over traditional surgical interventions, and the expansion of

healthcare infrastructure and reimbursement coverage for lung stent placement procedures are driving market growth. Furthermore, efforts to expand indications for lung stent use, optimize stent sizing and placement techniques, and enhance post-operative care and patient monitoring are expected to further propel market growth in the foreseeable future.
