Abstracts

The global Maternal Mental Health market size is poised to register 30.47% growth from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Maternal Mental Health market across By Disease (Postpartum Depression, Dysthymia, Pregnancy and Postpartum General Anxiety, Pregnancy and Postpartum OCD, Birth-Related PTSD, Others), By Therapy (Antidepressants, Interpersonal Psychotherapy (IPT), Cognitive Behavioral Therapy (CBT), Others).

The Maternal Mental Health market is experiencing significant growth attributed to the growing awareness about perinatal mental health disorders, increasing screening and diagnostic initiatives, and expanding treatment options and support services for pregnant and postpartum women. Maternal mental health disorders, including depression, anxiety, and postpartum psychosis, affect a significant proportion of women during pregnancy and the postpartum period, posing risks to maternal and infant health outcomes. Factors such as the rising prevalence of perinatal mood and anxiety disorders (PMADs), the impact of socioeconomic factors, life stressors, and traumatic experiences on maternal mental health, and the recognition of maternal mental health

as a public health priority by healthcare organizations and policymakers are driving market expansion. Additionally, the development of specialized screening tools and assessment protocols for early detection and intervention, and the integration of collaborative care models involving obstetricians, midwives, mental health professionals, and community support networks for comprehensive perinatal mental health care are fueling innovation in the market. Moreover, the expansion of telemedicine and digital health solutions for remote monitoring and teletherapy, the implementation of maternal mental health education and awareness campaigns, and the advocacy for policy reforms and funding initiatives to improve access to maternal mental health services are driving market growth. Furthermore, efforts to reduce stigma surrounding maternal mental health, promote self-care and coping strategies for pregnant and postpartum women, and enhance provider training and support for perinatal mental health management are expected to further propel market growth in the foreseeable future.
