## Abstracts

The global Medical Image Management market size is poised to register 6.9% growth from 2024 to 2032, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Medical Image Management market across By System (Vendor Neutral Archive, Picture Archiving and Communications System (PACS), Others), By End-User (Hospitals, Diagnostic Centers, Ambulatory Surgery Centers)

The medical image management market is characterized by the increasing demand for centralized storage and retrieval of medical imaging data, advancements in picture archiving and communication systems (PACS) and vendor-neutral archives (VNAs), and the growing need for interoperability and data accessibility in healthcare networks. By 2030, the market is poised to witness steady growth, driven by expansions in cloud-based image management solutions, enterprise imaging platforms, and image exchange networks. Further, expanding applications in telemedicine, teleradiology, and multidisciplinary collaboration are expected to drive market expansion, enabling healthcare organizations and imaging centers to streamline workflows, improve information access, and enhance patient care through medical image management solutions that offer scalability, security, and compliance with regulatory standards in the medical image management market and healthcare informatics industry.
