Abstracts

The global Multiple Myeloma Drugs market size is poised to register 6.83% growth (CAGR) from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Multiple Myeloma Drugs market By Therapy (Targeted therapy, Biologic therapy, Chemotherapy, Others), By Distribution Channel (Hospital pharmacy, Retail pharmacy, E-pharmacy).

The future of multiple myeloma drugs is influenced by advancements in cancer biology, immunotherapy, and precision medicine aimed at improving treatment outcomes and patient survival rates. Key trends include the development of novel targeted therapies, such as proteasome inhibitors, immunomodulatory drugs, and monoclonal antibodies, that disrupt tumor cell growth, survival, and immune evasion mechanisms specific to multiple myeloma. Additionally, there is a growing emphasis on the use of combination therapies, including chemotherapy, corticosteroids, and autologous stem cell transplantation, for achieving deeper and more durable responses in newly diagnosed and relapsed/refractory multiple myeloma patients. Moreover, advancements in biomarker discovery, molecular profiling, and minimal residual disease monitoring enable risk stratification, treatment selection, and personalized therapeutic strategies tailored to individual patient characteristics and disease subtypes, driving continuous improvement and adoption of multiple myeloma drugs in clinical practice and clinical trials..
