## Abstracts

The global Myasthenia Gravis Treatment market size is poised to register 8.71% growth from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Myasthenia Gravis Treatment market across By Type (Cholinesterase Inhibitors, Chronic Immunomodulators, Monoclonal Antibodies, Rapid Immunotherapies, Thymectomy, Others), By End-user (Hospitals, Clinics, Others).

The Myasthenia Gravis Treatment market is experiencing significant growth driven by the increasing prevalence of myasthenia gravis (MG), advancements in immunomodulatory therapies, and growing awareness about the disease among healthcare professionals and patients. Myasthenia gravis is an autoimmune neuromuscular disorder characterized by muscle weakness and fatigue due to impaired neuromuscular transmission caused by autoantibodies targeting acetylcholine receptors or other components of the neuromuscular junction. Key drivers of market growth include the expanding treatment options with the introduction of cholinesterase inhibitors, immunosuppressants, intravenous immunoglobulins, and monoclonal antibodies targeting B cells or complement proteins involved in the pathogenesis of MG. Additionally, the development of rapid-acting and long-acting formulations, subcutaneous administration routes, and home-based infusion therapies is driving innovation in MG treatment modalities. Moreover, the increasing utilization of disease-

modifying therapies, thymectomy procedures, and supportive care measures is improving clinical outcomes and quality of life for MG patients. Furthermore, advancements in diagnostic techniques, biomarker discovery, and patient monitoring technologies are facilitating early diagnosis, treatment optimization, and personalized management approaches tailored to individual patient needs.
