Abstracts

The global Myomectomy market size is poised to register 8.08% growth from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Myomectomy market across By Type (Abdominal, Laparoscopic, Hysteroscopic, Robotic), By Product (Laparoscopic Power Morcellators, Harmonic Scalpel, Laparoscopic Sealer, Others), By End-User (Clinics, Hospitals, Ambulatory Surgical Centers).

The Myomectomy Market is experiencing growth driven by the rising prevalence of uterine fibroids and the demand for minimally invasive surgical alternatives to hysterectomy for the treatment of symptomatic fibroids and preservation of fertility. Myomectomy is a surgical procedure performed to remove uterine fibroids while preserving the uterus, enabling women to maintain their reproductive potential and avoid the long-term consequences of hysterectomy. Key trends shaping its future include the development of minimally invasive myomectomy techniques such as laparoscopic, robotic-assisted, and hysteroscopic approaches for reduced post-operative pain, faster recovery, and improved cosmetic outcomes, the adoption of advanced energy devices and tissue morcellation systems for efficient fibroid removal and uterine reconstruction, and the customization of myomectomy procedures and surgical instruments to accommodate different fibroid sizes, locations, and patient

preferences. Additionally, factors such as the increasing awareness of uterine fibroid treatment options, the expansion of women's healthcare services and fertility clinics, and the advancements in imaging and surgical navigation technologies are expected to drive market growth in 2024 and beyond.
