Abstracts

The global Non-Magnetic Wheelchair market size is poised to register 7.25% growth from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Non-Magnetic Wheelchair market across By Patient Weight (Below 100kg, 100 kg to 150 kg, Above 150 kg), By Magnetic Field Strength (Up to 3T, Up to 7T), By End-User (Hospitals, Outpatient Facilities).

The Non-Magnetic Wheelchair market is witnessing steady growth attributed to the increasing demand for safe and accessible mobility solutions, advancements in wheelchair design and materials, and the growing prevalence of magnetic resonance imaging (MRI)-compatible medical devices. Non-magnetic wheelchairs are specially designed mobility aids suitable for use in MRI environments, where traditional ferromagnetic wheelchairs pose safety risks and interfere with imaging quality. Key drivers of market growth include the expanding applications of MRI technology in medical diagnostics, the rising incidence of conditions requiring MRI scans, and the need for patient comfort and safety during imaging procedures. Additionally, technological innovations in wheelchair construction using non-ferrous materials such as aluminum, titanium, and carbon fiber are driving market expansion. Moreover, the development of MRI-compatible wheelchair accessories and attachments, such as headrests, armrests, and footrests, is fueling innovation in the market. Furthermore, the increasing adoption of non-magnetic wheelchairs by healthcare facilities, imaging

centers, and rehabilitation clinics, coupled with the growing demand for patient-centered MRI-compatible equipment, is driving market growth in the foreseeable future.
