## **Abstracts**

The global Operating Room Integration market size is poised to register 10.7% growth from 2024 to 2032, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Operating Room Integration market across By Component (Software, Services), By Device (Display systems, Document Management systems, Audio & Video Management systems, Others), By Application (General Surgery, Orthopedic Surgery, Cardiovascular Surgery, Neurosurgery, Thoracic Surgery, Others), By End-User (Hospitals, Ambulatory Surgical Centers, Clinics, Others)

The future of the operating room integration market is influenced by advancements in healthcare IT, increasing demand for seamless interoperability, and growing emphasis on workflow optimization and patient safety in the operating room environment. Operating room integration systems consolidate various audiovisual, imaging, and data management technologies into a single platform, enabling surgeons and staff to control

and access critical information during surgical procedures. With the rise of digital surgery and collaborative teamwork, there is a growing need for operating room integration solutions that offer intuitive user interfaces, real-time data sharing, and interoperability with existing hospital systems. Further, technological innovations such as touchscreen displays, cloud-based data storage, and remote access capabilities are driving the development of next-generation operating room integration platforms with improved scalability, flexibility, and cybersecurity features. Over the forecast period to 2030, expanding applications in minimally invasive surgery, interventional radiology, and hybrid operating rooms, coupled with increasing investments in healthcare IT infrastructure and regulatory compliance initiatives, are expected to drive market growth and innovation, enabling healthcare providers to enhance surgical efficiency and patient outcomes.
