Abstracts

The global Surgical Sutures market size is poised to register 6.9% growth from 2024 to 2032, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Surgical Sutures market across By Product (Suture Thread, Automated Suturing Devices), By Type (Monofilament Sutures, Multifilament Sutures), By Application (Cardiovascular Surgery, General Surgery, Gynecological Surgery, Orthopedic Surgery, Ophthalmic Surgery, Cosmetic & Plastic Surgery, Others), By End-User (Hospitals, Ambulatory Surgical Centers, Clinics, Others)

In the Surgical Sutures market, the increasing demand for wound closure materials and techniques in surgical procedures is driving the growth of the surgical sutures market globally. Surgical sutures, also known as stitches, are medical devices used to approximate and secure tissue edges, promote wound healing, and prevent infection following surgical incisions or traumatic injuries. With the growing prevalence of chronic diseases, aging population, and surgical interventions, there is a rising need for surgical sutures that offer strength, biocompatibility, and predictable tissue response across

different surgical specialties and patient populations. Further, advancements in suture materials, coatings, and needle designs are driving market growth by enabling the development of innovative and user-friendly sutures that meet the evolving needs of surgeons and patients. By 2030, the market is poised for significant expansion as healthcare providers and medical device manufacturers continue to innovate and invest in surgical sutures to improve wound closure techniques, reduce postoperative complications, and enhance patient recovery.
