## **Abstracts**

The global Vertigo Drugs market size is poised to register 5.41% growth (CAGR) from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Vertigo Drugs market By Type (Peripheral vertigo, Central vertigo), By Distribution Channel (Offline, Online).

The future of vertigo drugs is characterized by several key trends shaping the landscape of neurotology and vestibular medicine. With the increasing prevalence of vestibular disorders such as benign paroxysmal positional vertigo (BPPV), Meniere's disease, and vestibular migraine, there is a growing demand for pharmacological treatments that offer effective symptom relief and improve quality of life for patients with vertigo and balance disorders. Technological advancements in drug discovery and development, including selective serotonin receptor antagonists, anticholinergic agents, and calcium channel blockers, are expanding the therapeutic options for vertigo, offering improved efficacy and tolerability compared to traditional vestibular suppressants and antiemetics. Moreover, the integration of personalized medicine approaches such as genetic testing and pharmacogenomics is enabling tailored treatment strategies based on individual patient characteristics and disease mechanisms, optimizing therapeutic outcomes and reducing the risk of adverse drug reactions. Additionally, there is a growing emphasis on multidisciplinary care models in vestibular rehabilitation, with otolaryngologists, neurologists, audiologists, and physical therapists collaborating to provide comprehensive and holistic care for patients with vertigo and balance disorders, incorporating pharmacotherapy, vestibular exercises, and lifestyle modifications to improve vestibular function and reduce symptom burden..
