Abstracts

This comprehensive seven-country report is designed to help current suppliers and potential market entrants identify and evaluate growth opportunities and strategies emerging in the global coagulation testing market during this decade. Available by country and section.

The report explores business and technological trends; provides estimates of the test volume for 35 assays, as well as sales and market shares of leading reagent and instrument suppliers; compares features of major analyzers; profiles leading market players; and identifies specific product and business opportunities facing instrument and consumable suppliers.

Rationale

The growing cost-containment pressures in major industrialized nations, coupled with continued technological advances in molecular diagnostics, chromagenic substrates, monoclonal antibodies, immunoassays, IT and laboratory automation will radically change coagulation testing practice.

Specific and sensitive markers of hemostasis will be increasingly used on automated instrumentation. Coagulation testing will also become more standardized, offering opportunities for quality control products and services. Moreover, the continuing contraction of the hospital system and technological advances will facilitate decentralization of the coagulation testing closer to the patient, thus creating POC opportunities and challenges for suppliers.
