## **Abstracts**

This 33-country survey from VPGMarketResearch.com contains over 900 pages, 380 tables and provides granular data and analysis not available elsewhere. The survey is designed to help current suppliers and potential market entrants identify and evaluate emerging opportunities emerging in the global hematology and flow cytometry markets during the next five years.

## **Rationale**

Continued advances in molecular diagnostics, monoclonal antibodies, lasers and IT, as well as growing understanding of immunologic forces regulating systemic diseases, will have a profound impact on the hematology and flow cytometry markets worldwide. New molecular diagnostic and monoclonal antibody tests will facilitate existing procedures and provide basis for sensitive, specific and simple assays. The introduction of smaller and easy-to-operate laser systems will further expand applications of flow cytometry to routine clinical laboratories. Further advances in IT will reduce the cost of instrument manufacture, service warranty, and permit development of self-troubleshooting, auto-calibration and other advanced features. Presently tedious analyses of chromosomal abnormalities, DNA content, and lymphocyte subsets will become more automated and routine.
