Date: March 2017

Pages: 125

Price: US\$ 3,465.00 (Single User License)

ID: 24B0AFD18FEEN

Abstracts

Complete report \$3,850. DataPack (test volumes, sales forecasts, supplier shares) \$2,500.

The report provides an overview of the cell surface marker testing in Europe (France, Germany, Italy, Spain, UK), including 5-year forecasts for CD4, CD8, CD34 and other markers by country.

Rationale

The use of surface marker identification and classification of cells is spreading beyond lymphocytes to the identification of monocytes, macrophages, myeloid stem cells, and tumor cells. A synergistic combination of the hybridoma technology with flow cytometry is further expanding the applications of both technologies. During the next five years, the main trend in cell surface marker analysis will be further simplification of the sample preparation and the analysis itself.

This report presents a detailed overview of the CD4, CD8 and CD34 Cell Surface Marker testing in five European countries, including clinical significance and current laboratory practice, as well as five-year test volume forecasts by country and market segment.

The report examines market applications of monoclonal antibodies, IT, DNA probes, biochips/microarrays, and other technologies; reviews features and operating

characteristics of automated analyzers; profiles leading suppliers and recent market entrants developing innovative technologies and products; and identifies alternative market penetration strategies and entry barriers/risks.

Contains 125 pages and 24 tables

Contents

I. INTRODUCTION

II. WORLDWIDE MARKET AND TECHNOLOGY OVERVIEW

A. Introduction

B. Thrombin Time: Clinical Significance and Current Laboratory Procedures

C. Instrumentation Review

D. Major in Vitro Diagnostic Technologies and Their Potential Applications

1. Chromogenic Substrates
2. Monoclonal and Polyclonal Antibodies
3. Immunoassays
 - a. Applications
 - b. Technological Principle
 - c. Enzyme Immunoassays (EIA)
 - Overview
 - ELISA
 - EMIT
 - Dot Immunobinding Assays
 - Capillary Immunoassays
 - Enzyme Amplification
 - Electrochemical Immunoassay
 - d. Fluorescent Immunoassays
 - Fluorescence Polarization
 - Time-Resolved Pulse Fluorescence
 - Fluorescence Lifetime
 - e. Latex Agglutination
 - f. Immunoprecipitation
4. Microcomputers
5. Automation
6. Robotics
7. DNA Probes
 - a. Overview

b. Amplification Methods
