## **Abstracts**

The report provides an overview of the cell surface marker testing in Europe (France, Germany, Italy, Spain, UK), including 5-year forecasts for CD4, CD8, CD34 and other markers by country.

The report is available by section, and can be customized to specific information needs and budget.

### **Rationale**

The use of surface marker identification and classification of cells is spreading beyond lymphocytes to the identification of monocytes, macrophages, myeloid stem cells, and tumor cells. A synergistic combination of the hybridoma technology with flow cytometry is further expanding the applications of both technologies. During the next five years, the main trend in cell surface marker analysis will be further simplification of the sample preparation and the analysis itself.

This report presents a detailed overview of the CD4, CD8 and CD34 Cell Surface Marker testing in five European countries, including clinical significance and current laboratory practice, as well as five-year test volume forecasts by country and market segment.

The report examines market applications of monoclonal antibodies, IT, DNA probes, biochips/microarrays, and other technologies; reviews features and operating

characteristics of automated analyzers; profiles leading suppliers and recent market entrants developing innovative technologies and products; and identifies alternative market penetration strategies and entry barriers/risks.

Contains 125 pages and 24 tables
