## **Abstracts**

This new 98-country survey from LeadingMarketResearch.com provides granular data and analysis not available from any other source.

The report explores business and technological trends; provides test volume and sales forecasts for 40 hemostasis procedures, as well as sales and market shares of leading competitors; compares features of major analyzers; profiles leading market players; and identifies specific product and business opportunities facing instrument and consumable suppliers during the next five years. The report is available by section, and can be customized to specific information needs and budget.

### **Rationale**

The growing cost-containment pressures in major industrialized nations, coupled with continued technological advances in chromogenic substrates, monoclonal antibodies, immunoassays, molecular diagnostics, IT and laboratory automation will radically change the global coagulation diagnostics practice during the next five years.

New specific and sensitive markers of coagulation will be increasingly used on automated instrumentation. Coagulation testing will also become more standardized, offering opportunities for quality control products and services. Moreover, the continuing contraction of the hospital system and technological advances will facilitate

decentralization of the coagulation testing closer to the patient, thus creating additional opportunities and challenges for suppliers.
