The microbiology testing market is one of the most rapidly growing segments of the in vitro diagnostics industry, and the greatest challenge facing suppliers. Among the main driving forces is continuing spread of AIDS, which remains the world's major health threat and a key factor contributing to the rise of opportunistic infections; threat of bioterrorism; advances in molecular diagnostic technologies; and wider availability of immunosuppressive drugs. Although for some infections the etiology is still a mystery, while for others the causative microorganisms are present in minute concentrations long before the occurrence of first clinical symptoms, recent advances in genetic engineering and detection technologies are creating exciting opportunities for highly sensitive, specific and cost-effective products. Geographic Coverage %li% France, Germany, Italy, Japan, Spain, UK, USAMarket Segmentation Analysis%li%Sales and market shares of major suppliers of microbiology products, by country and individual test.%li%Test and sales forecasts for over 100 microbiology assays by country, individual test and market
