VPGMarketResearch.com's new five-country report is designed to help current suppliers and potential market entrants identify and evaluate emerging business opportunities and develop effective strategies for the European coagulation testing market during the next five years.

The report explores business and technological trends in major European countries (France, Germany, Italy, Spain, UK); provides estimates of the test volume, as well as sales and market shares for leading instrument and reagent competitors; compares features of major analyzers; profiles leading market players; analyzes potential applications of emerging technologies; and identifies specific product and business opportunities facing instrument and consumable suppliers during the next five years.

Rationale

The growing cost-containment pressures in major industrialized nations, coupled with continued technological advances in chromogenic substrates, monoclonal antibodies, immunoassays, molecular diagnostics, computers and laboratory automation will radically change the European coagulation diagnostics practice during the next five years. New specific and sensitive markers of coagulation will be increasingly used on automated instrumentation. Coagulation testing will also become more standardized, offering opportunities for quality control products and services. Moreover, the continuing contraction of the hospital system and technological advances will facilitate

decentralization of the coagulation testing closer to the patient, thus creating additional opportunities and challenges for suppliers.
