WinterGreen Research announces the following study: Femtosecond Lasers for Cataract Surgery Market Shares, Strategies, and Forecasts, Worldwide, 2013-2018.

Femtosecond laser technology for cataract surgery represents a paradigm shift. Surgeons approach cataract surgery with the ability to use automated process that is more reliable and more repeatable than manual techniques previously available. Alcon LenSx femtosecond lasers increase precision for key manual steps of the cataract surgery procedure. This femtosecond laser cataract surgical system equipment makes it possible to deliver reproducible, predictable, and improved clinical outcomes for cataract surgery. Through image-guided visualization and micron-level laser precision, the surgeon has complete control over the surgery process. Femtosecond laser cataract surgical systems offer an improved patient safety profile.
