## Abstracts

Hearing Implants and Biomaterial markets are poised to achieve significant growth with increasing use of next generation metals, polymers, and ceramics set to enhance the value of hearing surgery and improve surgical outcomes. By improving hearing of people with profound hearing deficits. Improvements in hearing for severely deaf infants, children and adults particularly old people are dramatic.

Small implant, great results is the norm. The best results were found among children who received the cochlear implant at 0-3 years of age. They achieved 90 to 95 percent hearing and language improvement. 80-90 percent of these children develop a hearing and speech equal to those of children with normal hearing.

Biomaterials inside CI are biological materials that are implanted into the ear area to repair hearing. All CI manufacturers use platinum contacts in electrode production. Iridium oxide coatings have been investigated, which show beneficial effects of impedance.

Biomaterials for hearing implants depend on components, structural polymers, and electrodes. Biomaterials have transformed medical treatment of hearing loss. The ear functioning, hearing loss is able to be addressed with functioning repaired via a device implant that leverages biomaterials.

The cochlear implant has become widely recognized as an established treatment for profound hearing loss. This bodes well for market growth, as there is minimal, less than one percent market penetration now. New materials and greater surgeon experience are expected to reduce the cost of the implant, both the device and the procedure.

Economies of scale always decrease costs and increase market size. The trend likely to continue is for Cochlear implants as medical devices to continue to be used more often. Implants bypass damaged structures in the inner ear and directly stimulate the auditory nerve. They are surgically implanted to improve hearing in people with severe or profound hearing losses. They can create a range of sound, but do not replace normal hearing.

Cochlear implants are not indicated for all hard of hearing or deaf people. They are not recommended in people who function well with hearing aids.

The implant works by picking up incoming sounds. Incoming sounds are converted to electrical currents and directed to a number of contact points on the internal wire. This operation creates an electrical field which directly stimulates the auditory nerve, thus bypassing the defective inner ear. Cochlear implants convert sound waves to electrical impulses and transmit them to the inner ear, providing people with the ability to hear sounds and potentially better understand speech without reading lips.

According to the lead author of the team that prepared the study: “Cochlear implants extend the medical device markets by enabling a bypass of damaged structures in the inner ear. They directly stimulate the auditory nerve. They are surgically implanted to improve hearing in people with severe or profound hearing losses. They can create a range of sound, but do not replace normal hearing.”

## Contents

### **HEARING IMPLANT BIOMATERIALS EXECUTIVE SUMMARY**

Hearing Implants Biomaterials Market Driving Forces  
Surgical Cochlear Implantation Is By And Large Safe  
Hearing Implant Market Shares  
Hearing Implant Biomaterials Market Forecasts

### **1. BIOMATERIALS FOR HEARING IMPLANTS: MARKET DESCRIPTION AND MARKET DYNAMICS**

1.1 Use Of Cochlear Implants  
1.2 Ear Description  
1.2.1 Cochlear Implant (CI) System  
1.2.2 Biomaterial As A Substance  
1.3 Bilateral CI Fitting  
1.4 Cochlear Implants Biomaterials  
1.4.1 Silicone  
1.4.2 Platinum  
1.4.3 Titanium  
1.4.4 Ceramics  
1.5 Biomaterials in Hearing Implant

### **2. HEARING IMPLANTS AND BIOMATERIALS MARKET SHARES AND FORECASTS**

2.1 Hearing Implants and Biomaterials Market Driving Forces  
2.1.1 Surgical Cochlear Implantation Is By And Large Safe  
2.2 Hearing Implant Market Shares  
2.2.1 Cochlear  
2.2.2 Advanced Bionics AG  
2.2.3 Med-EL EAS  
2.3 Biomaterials Market Forecasts  
2.3.1 Biomaterial Hearing Implant Segments, Children, Adults Age 19 to 50, Adults 51 to 64, Adults Over 65, Market Forecasts  
2.3.2 Biomaterial Hearing Implant Market Installed Base Forecasts  
2.4 Global Biomaterials Market  
2.4.1 Optimizing the Biocompatibility Properties Of The Hearing Implant

- 2.4.2 Biofilms
- 2.4.3 Teflon for Cochlear Implants
- 2.4.4 Electrically Conducting Polymers
- 2.4.5 Polyimides
- 2.4.6 Silicon Electrodes
- 2.4.7 Physical Functionalization Of Surfaces
- 2.4.8 Drug Delivery In The Inner Ear (Neurotrophic Effects)
- 2.4.9 BioMaterial Nanoparticles
- 2.4.10, Nanoparticles And Cochlear Implants
- 2.4.11, Biomaterials Market Overview
- 2.5 Cochlear (CI) Implant Technical Specifications
  - 2.5.1 Advanced Bionics Technical Specifications
  - 2.5.2 Cochlear Technical Specifications
- 2.6 Biomaterials Pricing
- 2.7 Biomaterials Regional Segment Analysis
  - 2.7.1 United States
  - 2.7.2 Europe
  - 2.7.3 Rapid Development of Middle Class in South America

### **3. BIOMATERIAL HEARING IMPLANTS PRODUCT DESCRIPTION**

- 3.1 Cochlear
  - 3.1.1 Cochlear Kanso Sound Processor
  - 3.1.2 Cochlear Nucleus® 6 Sound Processor
  - 3.1.3 Cochlear Hearing Implant Specifications
  - 3.1.4 Cochlear Implant Technical Specifications
- 3.2 Med-El GmbH's Flex EAS
  - 3.2.1 Med-EL EAS Hearing Implant System for Partial Mild To Moderate Deafness
  - 3.2.2 Hearing Implant Advantages Of Bilateral Implantation
  - 3.2.3 MedEL Implant Concerto
  - 3.2.4 MedEL Implant Concerto Structure Preservation
  - 3.2.1 MedEL Implant Concerto Complete Cochlear Coverage CCC
  - 3.2.2 Med-EL Electrode Arrays
  - 3.2.3 Med-EL FLEX Tip Technology
  - 3.2.4 Med-EL Classic Series
  - 3.2.5 Med-EL FLEX Series
  - 3.2.6 FDA Approves the MED-EL Synchrony EAS Hearing Implant System
  - 3.2.7 Med-EL Addresses Hearing Loss in the US
  - 3.2.8 MED-EL Technical Specifications

### 3.3 Sonova / Advanced Bionics AG

#### 3.3.1 Advanced Bionics Implant Specifications

## 4. BIOMATERIALS RESEARCH AND TECHNOLOGY

### 4.1 Medical Device Standards and Implant Standards - ASTM International

#### 4.2 Metallic Implants

##### 4.2.1 Unalloyed Titanium

##### 4.2.2 Titanium Alloy

### 4.3 Hearing Implant Prosthesis Biomaterials

## 5. EAR IMPLANT BIOMATERIALS COMPANY PROFILES

### 5.1 Cochlear

#### 5.1.1 Cochlear Revenue

### 5.2 Med-EL Maestro

#### 5.2.1 Med-EL Hearing Implant Concerto

#### 5.2.2 Med-EL Revenue

#### 5.2.3 Med-EL Implantable Solutions

### 5.3 Nurotron Biotechnology Co., Ltd. (China)

#### 5.3.1 Nurotron Biomaterials Positioning

#### 5.3.2 Nurotron Biotechnology Thin, Ergonomic, Titanium Implant Package

#### 5.3.3 Nurotron Biotechnology Expands Facilities, Staff Ten-Fold

#### 5.3.4 Nurotron Biotechnology Co., Ltd.

### 5.4 Sonova / Advanced Bionics AG

#### 5.4.1 Sonova Group Revenue / Advanced Bionics

#### 5.4.2 Sonova / Advanced Bionics

### 5.5 William Demant / Oticon Medical / Neurelec

## I would like to order

Product name: Hearing Implant and Biomaterials Market Shares, Strategies, and Forecasts

Product link: <https://marketpublishers.com/r/H0CA5B7354AEN.html>

Price: US\$ 4,200.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:

[info@marketpublishers.com](mailto:info@marketpublishers.com)

## Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click button on product page <https://marketpublishers.com/r/H0CA5B7354AEN.html>
