## **EXECUTIVE SUMMARY**

The instant coffee market in Africa was equal to 2.50 billion USD (calculated in retail prices) in 2014. Until 2024, the coffee market in Africa is forecast to reach 12.87 billion USD (in retail prices), thus increasing at a CAGR of 15.77% per annum for the period 2019-2024. This is a decrease, compared to the growth of about 20.03% per year, registered in 2014-2018.

The average consumption per capita in value terms reached 4.60 USD per capita (in retail prices) in 2014. In the next five years, it grew at a CAGR of 9.43% per annum. In the medium term (by 2024), the indicator is forecast to slow down its growth and increase at a CAGR of 8.75% per annum.

In general, the main aspects that have been shaping the coffee consumption include taste, pleasure and caffeination. Particularly the instant coffee market has been prompted by the increasing consumption coming from developing regions and especially Asia and the Middle East. Although the consumption worldwide is growing, instant coffee still holds a relatively small share within the coffee segment. One of the reasons includes the premiumization which has restrained growth of the instant coffee in developed countries.

The growing demand for high-quality

coffee and the proliferation of pod machines in most of the developed regions have been imposing a significant challenge on the development of instant coffee market. In order to remain competitive, instant coffee producers have been adding more of the features of fresh coffee into instant. In fact, in the US and Germany, consumption of drip coffee is prevailing, while in Britain consumers prefer instant variants.
