## **EXECUTIVE SUMMARY**

The global sugar confectionery market was equal to 68.38 billion USD (calculated in retail prices) in 2014. Until 2024, the sugar confectionery market in the world is forecast to reach 103.31 billion USD (in retail prices), thus increasing at a CAGR of 3.62% per

annum for the period 2019-2024. This is a decrease, compared to the growth of about 4.75% per year, registered in 2014-2018.

The average consumption per capita in value terms reached 14.29 USD per capita (in retail prices) in 2014. In the next five years, it grew at a CAGR of 3.00% per annum.

In the medium term (by 2024), the indicator is forecast to slow down its growth and increase at a CAGR of 2.50% per annum.

sugar confectionery products are highly sensitive with regards to changes in consumer preferences. One of the leading trends not only in the sugar confectionery industry, but also in the food industry as a whole is linked with the constantly changing eating habits. In recent years, the customers are changing their eating habits and lifestyle more regularly. In particular, now, there are increasingly popular diets such as Ketogenic and Paleo, which promote the high consumption of fats, due to which consumers continue to cut their carbohydrate intake. This shift in consumer preferences has stimulated sugar confectionery producers to become more innovative by offering not only lower carb variants, but also products with added health promoting components such as plant proteins, fiber, and others.

Sugar content is also one of the most important considerations, impacting the global sugar confectionery industry. The high levels of sugar consumption are major concern for many governments, media and various non-government organizations. In both developed and developing economies, the sugar content of children's food, in particular, has been an important topic in recent years. As a matter of fact, some of the leading retailers in the UK and the US have banned sales of sweet snacks such as biscuits and chocolate sugar confectionery from their checkouts. Ultimately, this has impacted the retail sales of many sugar confectionery manufacturers in these countries. In addition, Food and Drug Administration (FDA) in the US initiated a series of regulation updates, aiming to encourage consumers to buy healthier products by taking better informed decisions and to reform food industry standards. Added sugar is one of the largest changes with this new update, according to which, food companies must disclose added sugars on the food label. According to industry experts, after the new sugar labeling regulations come into effect in 2020, sugar confectionery producers will have the opportunity to limit sugar content, while also to enhance the flavor profile and texture of their products.
