EXECUTIVE SUMMARY

The global tea market was equal to 113.46 billion USD (calculated in retail prices) in 2014. Until 2024, the tea market in the world is forecast to reach 235.75 billion USD (in retail prices), thus increasing at a CAGR of 6.80% per annum for the period 2019-2024. This is a decrease, compared to the growth of about 8.70% per year,

registered in 2014-2018.

The average consumption per capita in value terms reached 20.71 USD per capita (in retail prices) in 2014. In the next five years, it grew at a CAGR of 4.75% per annum. In the medium term (by 2024), the indicator is forecast to slow down its growth and increase at a CAGR of 4.08% per annum.

The tea market has evolved dramatically in the past few years in line with consumers' changing behavior. Today, tea drinkers are more interested in high-quality products with a great story and drinks that give them specific health benefits, which has driven demand for healthy green, functional botanical tea and herbal blends. In addition, the perception of tea has also changed, as it is viewed by most younger consumers as a sensual and wellness drink.

Premiumization is another positive development on the market, as customers are showing strong preferences for functional botanical blends and single estate artisanal teas. More and more people are interested in innovative flavor combinations, as well as in authenticity and the story behind certain brand. When it comes to different types, a recent trend suggests that natural, earthy alternative flavors such as ginger, matcha, turmeric and cumin are in higher demand. Cheese tea is another food service phenomenon, which has been especially popular in Asian countries such as Malaysia, Taiwan, and China.

Another interesting trend on the tea

market is the emergence of tea pairing menus. Since customers are increasingly opting for unique and experience led products, different restaurants have been trying to enhance culinary experience by introducing a several course tea pairing menu. In addition, the tea market has been expanding outside the category of hot beverages with the development of new ready-to-go drinks and iced tea variants. Kombucha, for example, has shown an impressive growth over the past few years from a niche product to a well-established product in mainstream supermarkets.
